The present invention relates to an Arabidopsis NI16 gene promoter useful in regulating transcription of coding sequence of interest. The invention is useful in production of transgenic plant or seed exhibiting resistance to herbicides and microorganism such as Phytophthora parasitica, bedudomonas syringae, Cercospora nicotianae, Peronospora parasitica. The present sequence is Arabidopsis thaliana NI16 promoter DNA. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CATGACAAATATTAATATATCAGTGTTAATAACATGTTTTGTTCTTAAAATACATGCATT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AGAAAGAGAGAACATGTAGGTGAACAAAATAAAGAGATATGATGATATATTTATGAGAG
                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to Arabidopsis NI16 gene encoding a protein involved in the regulation of SAR gene expression in plants. The NI16 nucleic acid molecule and the encoded protein is useful in increasing systemic acquired resistance (SAR) gene expression in a plant. The present sequence is Arabidopsis thaliana NI16 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CATGACAAATATATATATCAGTGTTAATAACATGTTTTGTTCTTAAAATACATGCATT

The present invention relates to an Arabidopsis NII6 gene promoter useful in regulating transcription of coding sequence of interest. The invention is useful in production of transgenic plant or seed exhibiting resistance to herbicides and microorganism such as Phytophthora parasitica. Pseudomonas syringae, Cercospora nicotianae, Peronospora parasitica. The present sequence is Arabidopsis thaliana NII6 genomic DNA, including the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CATGACAAATATTAAATATCAGTGTTAATAACATGTTTTGTTCTTAAAATACATGCATT

The invention is useful in production of transgenic plant or seed exhibiting resistance to herbicides and microorganism such as Phytophthora parasitica. Pseudomonas syringae, Cercospora nicotianae, Peronospora parasitica. The present sequence is Arabidopsis thaliana NI16 promoter DNA. This sequence is used in the exemplification of the invention.

           The present invention relates to an Arabidopsis NI16 gene promoter useful in regulating transcription of coding sequence of interest. The invention is useful in production of transgenic plant or seed exhibiting resistance
                                                 to herbicides and microorganism such as Phytophthora parasitica,
Pseudomonas syringae, Cercospora nicotianae, Peronospora parasitica. The
present sequence is Arabidopsis thaliana NI16 promoter DNA. This sequence

in regulating transcription of coding sequence of interest. The invention is useful in production of transgenic plant or seed exhibiting resistance to herbicides and microorganism such as Phytophthora parasitica. Pseudomonas syringae, Cercospora nicotianae, Peronospora parasitica. The present sequence is Arabidopsis thaliana NI16 promoter DNA. This sequence

The invention relates to 17880 cotton expressed sequence tags (ESTs;

ACN45220-ACN63099). The ESTs were isolated from CDNA libraries generated
from primed or non-primed seeds from variety DPSCOB, mature seeds from
c variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
c variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
c variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
c variety Coker 312 Boswell 96 Field, and septa from variety
CC Comprising a nucleic acid of the invention. The cotton ESTs are useful as
c invention, and to transformed plants having a nucleic acid construct
CC comprising a nucleic acid of the invention. The cotton ESTs are useful as
colecular tags to isolate genetic regions, to isolate genes to members of a particular gene family. The nucleic acid molecules may be
cused for isolateing a variety of agronomically significant genes
c associated with plant growth, quality, yield, and could also serve as
clinks in metabolic and catabolic pathways. The nucleic acid molecules are
clinks in metabolic and catabolic pathways. The nucleic acid molecules are
colouring seed germination or that may be used to mitigate stresses encountered
curing seed germination. The ESTs additionally enable the acquisition of
promoters and cis-regulatory elements which will be useful to express
conditional significant genes in these tissues and closured and also permits the acquisition of molecular markers useful in breeding
c schemes, genetic and molecular mapping, and in cloning of agronomically
condition the nucleic acid molecules are further useful for action or the nucleic acid molecules are further useful in breeding
c schemes, genetic and molecular mapping, and in cloning of agronomically
contributed to action or the nucleic acid molecules are further useful in breeding
contributed and also permits the acquisition of molecules are further useful in breeding detecting the expression level or pattern of a protein or mRNA and for detecting the presence or quantity of a protein by tissue printing. The present sequence represents a specifically claimed EST isolated from a cotton variety Nucotton31B androecium tissue cDNA library (LIB3828). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340 TIGITACAATAITACAIGGGITITITAITGGATAACAIGACAAATAITITAITTATTICAIG 144 145 AGTITITATIGGATAGCATGACAAATATIAATATATCAGTGTTAATAACATGTTTTGTTC 204 TCACAACGACATTGACGGAAAATTCAGGTAAAAAGAGAAAATAAAAGAATGAGAGATAGAG 324 AGATTTCTATGGAAAAAGAAAGAGAACATGTAGGTGAACAAAATAAAGAGATATGATG 384 TTAAAATACATGCATTTTAAAATCAGACATTTGTTTTAAAATCAAATCTAATCTTTATA 385 ATATATTTATGAGAGGTGGTGAAGATTATTTTAGGAGAGGGGAGAGAATAGAAAAG Gaps .; 0 8.9%; Score 86; DB 13; Length 537; 0; Mismatches 255;, Indels Sequence 537 BP; 377 A; 7 C; 39 G; 114 T; 0 U; 0 Other; Pred. Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CpG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epignetic parameters, the differences serving as basis for diagnosis and vor prognosis events which are diseavened to patients. The sequences of the invention are useful for the diagnosis and therapy
                                                                                                                                                                                                                                                                  Cell cycle; human, CpG dinucleotide; cytosine methylation; HIV; aging; human immunodeficiency virus; neurodegenerative disorder; solid tumour; graft-versus-host disease; glomerular disease; Lewy body disease; cancer; arthritis; arteriosclerosis; anti-HIV; neuroprotective; antiarthritic; immunosuppressive; antitumour; cytostatic; antiarteriosclerotic; ds;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                165 ACAAATATTAATATCAGTGTTAATAACATGTTTTGTTCTTAAAATACATGCATTTTAA 224

The invention relates to 17880 cotton expressed sequence tags (BSTs; ACN45220-ACN63099). The ESTs were isolated from CDNA libraries generated from pariety DPSDB, mature seeds from variety DPSDB, mature seeds from variety person on non-primed seeds from variety DPSDB, mature seeds from variety Coker 312 BOSWell 96 Field, and androecium tissue, gynoecium tissue, developing fibres, carpel walls and septa from variety CK function338. The invention also relates to substantially purified proteins or their fragments encoded by nucleic acid molecules of the invention, and to transformed plants having a nucleic acid construct comprising a nucleic acid of the invention. The cotton ESTs are useful as molecular tags to isolate genetic regions, to isolate genes, to mapper cc molecular gene function and to determining whether genes are useful complexed of aparticular gene family. The nucleic acid molecules are used for isolating a variety of agronomically significant genes cc used for isolating a variety of agronomically significant genes important in initiating and maintaining seed germination or that may be used to mitigate stresses encountered during seed germination or that may be used to mitigate stresses encountered control or that may be used to mitigate stresses encountered control or integrated from the sequence and cis-regulatory elements which will be useful in breeding control or significant genes in these tissues and/or other tissues, and also permits the acquisition of molecular markers useful in breeding schemes, genetic and molecular mapping, and in clohing of agronomically significant genes in these tissues and or expression level or pattern of a protein or mRNA and for detecting the expression level or pattern of a protein or mRNA and for detecting the expression level or pattern of a protein or mRNA and for detecting the expression level or pattern of a protein or many pring, and in or pattern of present sequence represents a specifically claimed EST isolated from a cotton variety Nucotton338 androecium ti

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            484
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation.
                                                                                                                                                                                                                                                                                               The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AlbS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

inhibition of harmful apoptosis, is therapeutic. The recombinant viruses are useful as vectors for gene therapy which can be applied to cancer therapy for destroying cancer cells selectively, the treatment of autoimmune diseases and graft rejection reaction, and apoptosis induction therapy for inflammatory cells in inflammatory diseases. Prior arts have encountered the problem where if an adenovirus vector capable of expressing an apoptosis-associated gene is introduced into animal cells, the cells producing the virus will be destroyed because the period of time required to induce cell death by apoptosis is shorter than that required to replicate and produce the virus, resulting in failure to obtain a recombinant virus having the integrated apoptosis-associated gene. In this invention an apoptosis-resistant 293 cell line (having an apoptosis resistent gene introduced) is established and overcomes the problem. The present sequence represents the base sequence of the plasmid parample from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AGGAAGAAGAAGAGAAAGGCTAAAATAGACTAACTATTGCCAAAATTTCTGTAGCCGAC 610

The recombinant viruses generated are capable of expressing apoptosis-associated genes. These can then be used in a variety of diseases for which the induction of apoptosis by gene transfer, or where the

The recombinant viruses generated are capable of expressing apoptosis-associated genes. These can then be used in a variety of diseases for which the induction of apoptosis by gene transfer, or where the inhibition of harmful apoptosis, is therapeutic. The recombinant viruses are useful as vectors for gene therapy which can be applied to cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an apoptosis-resistant virus-sensitive cell line into which an apoptosis resistance gene has been introduced. The recombinant viruses generated are capable of expressing apoptosis-associated genes. These can then be used in a variety of diseases for which the induction of apoptosis, is therapeutic. The recombinant viruses are useful as vectors for gene therapeutic. The recombinant viruses are useful as vectors for gene therapeutic. The recombinant viruses therapy for destroying cancer cells selectively, the treatment of therapy for inflammatory cells in inflammatory diseases. Prior arts have encountered the problem where if an adenovirus vector capable of encountered the problem where if an adenovirus vector capable of the encountered the problem where if an adenovirus vector capable of the cells producing the virus will be destroyed because the period of time required to induce cell death by apoptosis is shorter than that cequired to replicate and produce the virus, resulting in failure to obtain a recombinant virus having the integrated apoptosis-associated gene. In this invention an apoptosis-resistent 293 cell line (having an apoptosis resistant gene introduced) is established and overcomes the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   therapy for destroying cancer cells selectively, the treatment of the autoimmune diseases and graft rejection reaction, and apoptosis induction therapy for inflammatory cells in inflammatory diseases. Prior arts have encountered the problem where if an adenovirus vector capable of expressing an apoptosis-associated gene is introduced into animal cells, the cells producing the virus will be destroyed because the period of time required to induce cell death by apoptosis is shorter than that required to replicate and produce the virus, resulting in failure to obtain a recombinant virus having the integrated apoptosis-associated gene. In this invention an apoptosis-resistent 293 cell line (having an apoptosis resistent gene introduced) is established and overcomes the problem. The present sequence represents the cowpox virus bar gene which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                   250

/note="PCR was performed on Arabidopsis thailana lines each of which contains one or more TDNA insertion elements. The resultant fragment for each line was directly sequenced to determine the genomic sequence at the atte of insertion. Details of the protocols used can be found at http://signal.salk.edu/tdna_protocols.html"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota, Viridiplantae, Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Viridiplantae, Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; Cosids; eurosida II; Brassicales; Brassicaceae; Arabidopsis.

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcyo Osocgaw and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named REC1.98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pland BAC library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - . This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at EDEPH (Centre d'Etudé du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description

                                             Sequence 16, Application US/09128155
Patent No. 6117654
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NOVEL MOLECULES OF TANGO-77 RELATED PROTEIN FAMILY
TITLE OF INVENTION: AND USES THEREOF
TITLE OF INVENTION: AND USES THEREOF
CHRRENT APPLICATION NUMBER: US/09/128,155
CURRENT FILING DATE: 1998-08-03
EARLIER APPLICATION NUMBER: US 60/091,650
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..
